

Test Suite: Mock User Auth API

1. Authentication Test

- ✓ should authenticate user with valid credentials (61 ms)
- ✓ should return an error with invalid credentials (5 ms)

2. Create User Test

- ✓ should create a user with valid data (7 ms)
- ✓ should return an error with invalid data (4 ms)

3. Get User Test

- ✓ should get user with valid authorization (5 ms)
- ✗ should return an error without authorization (21 ms)

4. Update User Test

- ✓ should update user with valid authorization (4 ms)
- ✗ should return an error without authorization (4 ms)

5. Delete User Test

- ✗ should delete user with valid authorization (7 ms)
- ✗ should return an error without authorization (5 ms)

6. Delete All Users Test

- ✗ should delete user with valid authorization (4 ms)
- ✗ should return an error without authorization (4 ms)

Please note that the tests marked with ✗ have failed. You might want to look into those to ensure your application works as expected.

And all of ✗ return 403 as forbidden not as 401 unauthorized.
